

NOVADirect™ Buffer

Cat. No. : BM0630-0050 Package: 50mL Store all components at room temperature.

Descriptions:

NOVADirect[™] Buffer is designed to perform PCR directly from various samples with no prior DNA purification. Samples such as blood, plasma, serum, buccal swabs, saliva, tissue and plant (leap & seed) are suitable materials. This kit is extremely easy and simple, just mix with the sample and buffer for preparing PCR.

Recommended Protocol

A. Whole Blood

- 1. Collect blood into tubes containing anticoagulant.
- 2. Transfer 10~50µl of blood to 1.5ml micro tube.
- 3. Add 100µl of NOVADirectTM Buffer and mix by vortex 3 sec.
- 4. Store at R/T for 1~10 min.
- 5. Use 1~5µl of supernatant directly to PCR reaction.

B. Serum / Plasma

- 1. Transfer 10~50µl of Serum (or Plasma) to 1.5ml micro tube.
- 2. Add 100µl of NOVADirectTM Buffer and mix by vortex 3 sec.
- 3. Store at R/T for $1 \sim 10$ min.
- 4. Use 1~5µl of supernatant directly to PCR reaction.

C. Dried Blood

- 1. Collect the blood sample onto a collection card or filter paper and allow drying completely.
- 2. Punch a disk (preferably 1.2mm diameter) or cut the filter paper into
- 1x1mm squares and place into a 1.5ml micro tube.
- 3. Add 100µl of NOVADirect[™] Buffer and mix by vortex 10 sec.
- 4. Store at R/T for 1~10 min.
- 5. Use $1 \sim 5\mu l$ of supernatant directly to PCR reaction.

D. Animal Tissue / Mouse Tail

- 1. Place a 1~2mm piece (5 ~10mg) of animal tissue into the 1.5ml micro tube.
- 2. Add 100µl of NOVADirectTM Buffer and mix by vortex 3 sec.
- 3. Store at R/T for 1~10 min.
- 4. Use 1~5µl of supernatant directly to PCR reaction.

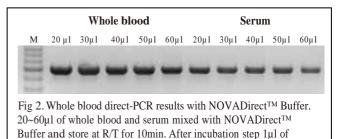

Fig Animal tissue direct-PCR results with NOVADirectTM Buffer. After incubation step (10 min.) $2 \sim 7 \mu l$ of supernatant used as PCR template. Lane M : 100bp DNA marker
